Priority Details :

1977SU-2449595 19770207

IPC s :

A61B-017/18

Abstract :

SU-637118 A

Physiological mobility of the hand joint is ensured with the endoprosthesis fixator in the form of lesson (RTM) tape which is biologically inert. The ends of the tape are outside the prosthesis silicone rubber housing and are sutured to the wall of the joint capsule.

The tape is 5mm wide and 0.2mm thick, and eliminates shift of the prosthesis in the postoperational period.
